### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance:

A review of Applicant's arguments in the Paper filed 10/6/2009 and a review of the instant claims has convinced the examiner that the claims are allowable over the applied prior art of record.

2. Regarding independent claim 1 and the dependent claims, the prior art fails to teach or suggest a laminate comprising alternating metal layers and at least one plastic bonding layer, each of said metal layers comprising two metal layer sections, said two metal layer sections having mutually overlapping ends whose opposing surfaces are bonded to one another, one of said mutually overlapping ends being displaced in a thickness direction of the laminate to overlap the other of said mutually overlapping ends so that, except for the displaced one of the ends, said two metal layer sections are extensions of one another, and a fill that comprises at least one further metal layer, said fill being spaced from and not overlapping the mutually overlapping ends and having a thickness such that at the location of the fill the laminate has a thickness equal to a thickness of the laminate at the mutually overlapping ends.

3. The closest prior art of Roebroeks (WO/ 02/078950) teaches a laminate with alternating metal layers and at least one plastic bonding layer, however, fails to teach a fill that comprises at least one further metal layer, said fill being spaced from and not overlapping the mutually overlapping ends and having a thickness such that at the location of the fill the laminate has a thickness equal to a thickness of the laminate at the mutually overlapping ends.

4. Regarding independent claim 22 and the dependent claim, the prior art fails to teach or suggest a laminate comprising: alternating metal layers and at least one plastic bonding layer, each of said metal layers comprising two metal layer sections, wherein in a join region of said laminate said two metal layer sections have mutually overlapping ends whose opposing surfaces are bonded to one another, one of said mutually overlapping ends being displaced in a thickness direction of the laminate to overlap the other of said mutually overlapping ends, and wherein in a fill region of said laminate a fill, comprising a further metal layer, is provided between two of said metal layers and spaced laterally from the mutually overlapping ends so as to avoid overlapping the mutually overlapping ends, said fill having a thickness such that in the fill region the laminate has a thickness equal to a thickness of the laminate in the join region.
5. The closest prior art of Roebroeks (WO/ 02/078950) teaches a laminate with alternating metal layers and at least one plastic bonding layer, however, fails to teach wherein in a fill region of said laminate a fill, comprising a further metal layer, is provided between two of said metal layers and spaced laterally from the mutually overlapping ends so as to avoid overlapping the mutually overlapping ends, said fill having a thickness such that in the fill region the laminate has a thickness equal to a thickness of the laminate in the join region.
6. Regarding independent claim 24, the prior art fails to teach or suggest a laminate comprising: at least four metal layers and a respective plastic bonding layer between each adjacent pair of said metal layers, wherein each of said metal layers comprises a pair of metal layer sections, each said pair of metal layer sections having mutually

overlapping ends whose opposing surfaces are bonded to one another, wherein, in each said pair, one of said mutually overlapping ends is displaced in a thickness direction of the laminate to overlap the other of said mutually overlapping ends in the respective said pair so that, except for the displaced one of the ends, said pair of metal layer sections are extensions of one another, wherein said mutually overlapping ends of each said pair of metal layer sections do not overlap said mutually overlapping ends of any other said pair of metal layer sections such that at the location of said mutually overlapping ends the laminate has a uniform thickness; and a fill that comprises at least one further metal layer, said fill being spaced from and not overlapping any of said mutually overlapping ends and having a thickness such that at the location of the fill the laminate has a thickness equal to the uniform thickness of the laminate at said mutually overlapping ends.

7. The closest prior art of Roebroeks (WO/ 02/078950) teaches a laminate with alternating metal layers and at least one plastic bonding layer, however, fails to teach a fill that comprises at least one further metal layer, said fill being spaced from and not overlapping any of said mutually overlapping ends and having a thickness such that at the location of the fill the laminate has a thickness equal to the uniform thickness of the laminate at said mutually overlapping ends.

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
